2.3	Employee Graph .....	6
2.4	EmployeeImportMapping Graph.....	7
2.5	UserSettings Graph .....	7
2.6	Booking Graph .....	8

# 1 Mutations

## 1.1 UpdateCompanySettings Mutation

Accept new `maxFutureBookingDuration` field with allowed values as `{days: 1..180}` `{weeks: 1..26}` or `{months: 1..6}`.

**In a case of sending 2 keys at the time you will be able to fetch only one in the order of value existence - days -> weeks -> months**

```
mutation UpdateCompanySettings($input: UpdateCompanySettingsInput!) {
  updateCompanySettings(input:$input) {
    maxFutureBookingDuration {
      ... on TimeDurationDays {days}
      ... on TimeDurationWeeks {weeks}
      ... on TimeDurationMonths {months}
    }
  }
}

# VARIABLES
{
  "input": {
    "maxFutureBookingDuration": { days: 80 }
  }
}
```

## 1.2 UpdateEmployee Mutation

Accept new boolean `isRemote` and `noDeskNeeded` arguments. Will become a replacement for **doNotCountAsUnallocated**

```

mutation UpdateEmployee($input: UpdateEmployeeInput!) {
  updateEmployee(input:$input) {
    employee {
      isRemote
      noDeskNeeded
      doNotCountAsUnallocated
    }
  }
}

# VARIABLES

{
  "input" => {
    "id" => employee_id,
    "doNotCountAsUnallocated" => false,
    "isRemote" => nil,
    "noDeskNeeded" => nil,
  }
}

```

### 1.3 CreateEmployee Mutation

Accept new boolean `isRemote` and `noDeskNeeded` arguments. Will become a replacement for **`doNotCountAsUnallocated`**

```

mutation CreateEmployee($input: CreateEmployeeInput!) {
  createEmployee(input:$input) {
    employee { isRemote noDeskNeeded doNotCountAsUnallocated }
  }
}

# VARIABLES

{
  "input" => {
    "name" => name,
    "email" => email,
    "isRemote" => false,
    "noDeskNeeded" => false,
  }
}

```

### 1.4 ChangeExcludedToEmployee Mutation

Accept new boolean `isRemote` and `noDeskNeeded` arguments. Will become a replacement for **`doNotCountAsUnallocated`**

```

mutation ChangeExcludedToEmployeesMutation($input:
ChangeExcludedToEmployeesInput!) {
  changeExcludedToEmployees(input:$input) {
    employees{ doNotCountAsUnallocated isRemote noDeskNeeded }
  }
}

# VARIABLES

{
  "input" => {
    "ids" => employee_ids,
    "doNotCountAsUnallocated" => false,
    "isRemote" => nil,
    "noDeskNeeded" => nil,
  }
}

```

## 1.5 CreateEmployeeExport Mutation

Accept new NO\_DESK\_NEEDED filter.

**REMOTE Filter will return isRemote employees instead doNotCountAsUnallocated after doNotCountAsUnallocated field deprecation.**

```

mutation CreateEmployeeExportMutation($input: CreateEmployeeExportInput!) {
  createEmployeeExport(input:$input) {
    export { url id name }
  }
}

# VARIABLES

{
  "input": {
    "ValueFilter" : [NO_DESK_NEEDED]
  }
}

```

## 1.6 UpdateCompanySettings Mutation

New field userHealthNoticeEnabled controls can admins configure to receive health check failure notifications, defaults to true.

```

mutation _ ($input: UpdateCompanySettingsInput!) {
  updateCompanySettings(input: $input) {
    healthNoticeEnabled
  }
}

# VARIABLES
{
  "input": {
    "healthNoticeEnabled": false
  }
}

```

## 1.7 UpdateUserSettings Mutation

Accepts settings hash. Field `healthNoticeEnabled` controls should admin receive health check failure notifications, defaults to true, accessible to admins only.

```

mutation _ ($input: UpdateUserSettingsInput!) {
  updateUserSettings(input: $input) {
    settings {
      healthNoticeEnabled
    }
  }
}

# VARIABLES
{
  "input": {
    "settings": {
      "healthNoticeEnabled": false
    }
  }
}

```

## 1.8 CancelBooking Mutation

Now cancel available for LocationAdmins. But they can cancel only **booking** that was made for the **floor** they manage.

## 2 Queries

### 2.1 CompanySettings Graph

Return new union field maxFutureBookingDuration If setting doesn't have a value in the DB. { days: 80 } will be as default.

**Union types will be resolved in the order of value existence - days -> weeks -> months**

```

query _ {
  viewer {
    company {
      settings {
        maxFutureBookingDuration {
          ... on TimeDurationDays { days }
          ... on TimeDurationWeeks { weeks }
          ... on TimeDurationMonths { months }
        }
      }
    }
  }
}

```

### 2.2 EmployeeCounters Graph

Accept new NO\_DESK\_NEEDED filter.

**REMOTE Filter will return isRemote employees instead doNotCountAsUnallocated after doNotCountAsUnallocated field deprecation.**

```

viewer {
  company {
    name
    employees (ValueFilter: [NO_DESK_NEEDED REMOTE]) {
      counters {
        employees
        remote
        no_desk_needed
      }
    }
  }
}

```

### 2.3 Employee Graph

New fields isRemote and noDeskNeeded

```

query _ {
  viewer {
    company {
      employees {
        edges {
          node {
            isRemote
            noDeskNeeded
          }
        }
      }
    }
  }
}

```

## 2.4 EmployeeImportMapping Graph

**do\_not\_count\_as\_unallocated** is removed from the EmployeeImportMapping, please refer to the new fields **isRemote** and **noDeskNeeded** for information on replac

```

query ImportMapping {
  viewer {
    company {
      mapping {
        employeeMapping {
          do_not_count_as_unallocated
        }
      }
    }
  }
}

```

## 2.5 UserSettings Graph

Returns healthNoticeEnabled described above

```

query currentEmployee {
  viewer {
    settings {
      healthNoticeEnabled
    }
  }
}

```

## 2.6 Booking Graph

New field **isCurrentUserLocationAdmin** - true if booking is for the floor *LocationAdmin* manage.

```
company {
  bookingConnection {
    edges {
      node {
        id
        space { id }
        isCurrentUserLocationAdmin
      }
    }
  }
}
```
